

“Breast Cancer Genetics - More than BRCA”

featuring Barb Kunz, MS, certified licensed genetic counselor.

With all of the new technology and options available, is genetic testing really helpful in predicting breast cancer? Who can benefit from genetic testing? What testing options are available?

A few take-aways from this webinar will include:

- Different types of genetic testing available for hereditary breast cancer.
- Which personal and family history features signal that testing should be offered.
- Hereditary breast and ovarian cancer (HBOC) information and the importance of test results for individuals and their female and male relatives.

Featured speaker:

Barb Kunz is a licensed, certified licensed genetic counselor with over 30 years of experience in a wide range of hospital and clinic settings. She has been a cancer genetic counselor for the last 20 years - as senior genetic counselor at North Memorial Cancer Center for 18 years, and now as genetic counselor through McKesson Specialty Health, supporting The US Oncology Network cancer genetic providers.

- Barb has a strong interest in advancing public and professional genetic education, and has a private consulting and public speaking business, called DNAtalks.
- She is a past Chair of the Minnesota Genetic Counselors Association.
- She serves on the Minnesota Cancer Alliance policy committee and has served on the steering committee.
